Bachelor thesis

Description:

Ethiopia is one of the countries within Africa with a fast growing economy. One side effect of this economic growth has been the planning and construction of multiple big infrastructure projects within Ethiopia. Currently there are multiple infrastructure projects which have been recently finished, that are about to be finished or that are currently being planned for. Ethiopia itself is a rather large country, with many rather diverse areas. Specific Ethiopian industries are strong within different parts of the country. To better understand the connectivity of those industries, research is necessary.

Objectives:

- Create an overview of the different industries and the geographic hotspots of those industries within Ethiopia.
- Create an overview over the existing, currently being build and planned for infrastructure within Ethiopia.
- Determine and compare the connectivity of the different industry hotspots within Ethiopia.

Requirements:

- High degree of independence and motivation
- At least excellent communication and writing skills in either English or German
